

## MONEYSWORTH & BEST | *Shoe Cream*

Moneysworth & Best Shoe Creams combine the right amount of natural oils, waxes, lanolin and pigments to restore moisture to leather while also providing a soft and natural shine. Ideal for use on men's and women's smooth leather footwear. High quality German formula. Excellent colour pigmentation. Pleasantly scented.

### Directions:

Remove surface dirt. Apply cream with a dauber brush or clean cloth. Let dry completely (cream will absorb into leather) and lightly buff to reveal shine.

## MONEYSWORTH & BEST | *Color Sprays*

Moneysworth & Best Brillo Color Sprays renew or change the color of leather, vinyl and plastic.

There are over 50 fashion colors to choose from. Custom colors are also available upon request (minimum quantity required). Brillo Color Sprays meet California VOC requirements.

## MONEYSWORTH & BEST | *Color Sprays*

### Preparation:

Make sure the surface being dyed is clean and dry before spraying. Use Moneysworth & Best's Leather Preparer to remove all wax, grease and dirt. Glossy surfaces should be dulled to ensure proper adhesion of dye. Before you begin, protect your hands and cover surrounding work area. Tape any part of the leather you do not wish to dye for protection. Use in a well ventilated area, away from heat and flame. Best results are achieved when using at a room temperature of over 70°F (21°C). Do not apply at temperatures below 70°F (21°C).

### Color Matching:

Shake well for at least one minute to adequately mix color formulation. Test dye first on a piece of scrap material before spraying article. If the color test matches, achieve best results by following the directions listed below.

### Directions:

Shake well for at least one minute after the mixing beads begin to rattle. If the mixing beads aren't rolling freely, turn the can upside down and tap the bottom of the can with the palm of your hand to free the beads. The pigments inside the can must be thoroughly mixed to achieve the proper color and gloss. Not adequately shaking can affect color-matching.

When spraying, hold the can upright and 10-12" away from article. For best results, maintain even pressure on the nozzle. Spray with quick and even-misting passes to create a thin layer of dye. When a thin, smooth, continuous film has been achieved, the dye will have a glare or wet look. Allow the dye to dry 5 minutes and then continue with additional coats as needed. Shake the can periodically between coats.

Always clean the nozzle after spraying. Hold the aerosol can upside down and spray until you see a white gas (2-3 seconds). This will clear the valve and prevent dye from drying in the spray tip, which causes spitting.

### Storage:

To prepare the can for storage, ensure nozzle has been adequately cleaned by spraying upside down. Always store cans upright. Storing cans upside down can cause pigments to settle in the neck or valve of the can and can cause blockage. Never store cans where temperatures may exceed 120° F (49°C). Cold temperatures will not harm the aerosol, however always let cans settle to room temperature before using. It is advisable not to store cans at either temperature extreme for prolonged periods of time.

### Troubleshooting

#### Color doesn't match:

- The can may not have been shaken enough. The pigments inside the can must be thoroughly mixed to achieve the proper color and gloss. Shake for one minute and ensure mixing beads are rolling freely.
- If dyeing dark colored leather lighter, additional coats may be needed for adequate coverage.

#### Color appears flat or hazy:

- Humid conditions may exist.
- The surface you are spraying may be too hot. Remove the object from direct sunlight or heat; allow surface to cool and continue.

#### Paint surface appears speckled:

- Something is blocking spray dye flow.
- Rotate the nozzle ¼ turn and try again
- Remove and/or clean nozzle and stem using a toothpick.

**Note:** Never stick any object into the hole on top of the can.

- Soak nozzle in acetone to remove dried dye
- Can is being sprayed at an angle. Hold can upright 10-12" from object.
- Always spray the can upside down to clean the nozzle after each use.

#### Surface appears streaky:

- All application passes have been made in the same direction. Try a varying spray pattern keeping each pass even and thin.

#### Dye appears saggy or has runs:

- Too much dye was applied. Apply lighter coats by increasing the speed of your hand motion as you spray. Hold can 10-12" from surface. After 3-4 passes, allow dye to dry 5 minutes before continuing.
