INTRINSICALLY SAFE BATTERIES

FM To TIA-4950 Transition

Frequently Asked Questions

Why can't I get FM batteries anymore?

The previous LMR industry standard for intrinsically safe (IS) batteries was FM3610_88 and it expired in 2012. As a result, manufacturers had to stop producing FM3610_88 certified IS batteries as of December 31, 2015. FM did this to encourage adoption of their FM3640 standard which harmonized several IS standards (mostly IEC) from around the world with the goal of simplifying global trade. However, FM3640 required numerous changes to product design that were either too expensive or simply not viable for the U.S. radio market. For example, FM3640 imposed a lower maximum transmit power level for radios which caused a reduction in area coverage of more than 20%. In 2013 FM introduced yet another standard, FM3610_10, that offered some compromise but failed to gain any LMR industry acceptance.

How do the TIA-4950 and FM3610_88 standards compare?

To overcome the drawbacks of the FM3640 standards described above, the Telecommunications Industry Association (TIA) acquired rights to UL 913 5th Edition and created a competing IS standard specifically for LMR equipment, published by ANSI as ANSI / TIA-4950-2013. This TIA-4950 standard is very similar to the FM3610_88 standard by design. For example, FM3610_88 and TIA-4950 both use the same hazardous location (hazloc) classifications as defined by the NEC ANSI / NFPA 70 standard. This ensures that the TIA-4950 certified product's hazloc ratings system (Class / Division / Group) is identical to the FM hazloc rating system used by the AHJ (Authority Having Jurisdiction) at the user's environment. At the same time and by design, TIA-4950 is also more stringent than FM3610_88, at least with respect to spark assessment as described in below.

What are the hazloc classifications used by both FM3610_88 and TIA-4950?

The hazloc classifications are defined by Class, Division, and Group as summarized below. An IS battery certified under FM3610_88 or TIA-4950 with the same Class, Division, and Group rating would be safe to use in the environment for which it was rated.

CLASS	Class I – Flammable gases, vapors, or liquids. Class II – Combustible dust. Class III – Ignitable fibers / flyings.
DIVISION Area Classifications	Division 1 – Locations where ignitable gas, vapor, liquid, or dust are present continuously or some of the time under normal operating conditions. Division 2 – Locations where ignitable gas, vapor, liquid, or dust are not likely to exist under normal operating conditions.
GROUP Class I Gas Groups	Group A – Acetylene and equivalent gas groups. Group B – Hydrogen and equivalent gas groups. Group C – Ethylene and equivalent gas groups. Group D – Methane, and equivalent gas groups.
GROUP Class II Dust Groups	Group E – Conductive dust (mechanical, e.g. recyclers). Group F – Combustible carbon dust above ground only (e.g. charcoal, coke). Group G – Grain dust.
GROUP Class III Fiber Groups	No sub-groups for fibers.

Can a TIA-4950 battery be used as a replacement on FM certified radios?

The FM3610_88 standard defines a “system” certification. This means the radio and battery are tested and certified together. To address the need for a certified battery once FM certified batteries were no longer available, TIA-4950 was made more stringent than FM3610_88 by adding a 1.5x safety margin to the spark assessment testing specification. This ensures a TIA-4950 battery certified “standalone” can safely replace a system certified FM battery, given its hazloc ratings are the same or better. Consequently, LMR manufacturers now routinely offer TIA-4950 certified batteries as replacements for obsolete FM batteries. Power Products follows this practice in offering a line of TIA-4950 certified batteries.

Have Power Products batteries certified to FM3610_88 been recertified to TIA-4950?

Yes, LE1912MHIS (Harris P7100), LE9857MHIS (Motorola XTS2500), and LE4007MHXTIS (Motorola XTS5000) were originally certified to FM3610_88. Effective January 1, 2016 Power Products began selling these same batteries after recertification to TIA-4950 by SGS. These batteries have been purchased by many customers and used on FM certified radios with no issues since introduction in 2016.

Are there any differences between TIA-4950 batteries certified by SGS or UL?

UL and SGS are both nationally recognized testing laboratories (NRTLs).

The federal agency responsible for recognizing NRTLs is OSHA. Being recognized by OSHA allows NRTLs to test and certify products to safety specifications published by standards writing bodies (such as ANSI) once the NRTL has gained accreditation for that standard. Since both SGS and UL are accredited for TIA-4950 (an ANSI standard), SGS and UL markings are recognized by OSHA as completely equivalent indications of a product's compliance to the ANSI-TIA-4950 standard.

My FM radio will not accept a Motorola UL battery. Will it work with a Power Products IS battery?

Some Motorola FM radios incorporate firmware which detects the Motorola UL battery and will not power up. Our customers report they do not encounter the same issue when using a Power Products battery.

What intrinsically safe batteries does Power Products offer?

Power Products currently offers SGS certified intrinsically safe batteries for the radios listed below. A copy of the certification is available upon request.

What if I need a battery that isn't listed?

Reach out to your Power Products representative and we can discuss having the battery certified.

Unity Stand-Alone Rectifier

For applications that do not require rack-mounting or redundancy, the Unity is available as a stand-alone rectifier. A versatile flange permits a myriad of mounting options, such as on the side of rack rails, inside cabinets, on walls or under shelves, maximizing use of restricted spaces.

The unit comes with a 6' power cord and a rear-mounted terminal block for easy wiring.

Performance specifications are identical to single Unity Rectifiers detailed on this page.

Configure a Rack Power System in 10 Simple Steps

These 10 simple steps will enable you to configure your network or communication site Rack Power System (RPS) by defining your system parameters and distributor preference.

- 1) Rack width? 19" or 23"
- 2) Input voltage? 115 or 230 VAC
- 3) Output voltage? 12, 24, or 48 VDC, or 115/230 VAC
- 4) Load/output in amps or watts?
- 5) Redundant rectifiers? Yes or no
- 6) Number of output loads routed through distribution panel?
- 7) Battery back-up? If yes, for how long?
- 8) Remote monitoring?
- 9) Site location?
- 10) What distributor do you prefer?

Upon receipt of your response to these questions, we will contact you and your distributor of choice; if you do not have a preferred distributor, we will help you select one. We will create a proposed system layout and your distributor will prepare a quote for a fully integrated power system potentially including: power supplies, DC-DC converters, DC-AC Inverters, circuit breaker or fuse distribution, remote power monitoring, batteries and rack equipment shelving, all fully assembled in a relay rack, wired, tested, and palletized for delivery directly to your site and ready for installation.

DC-DC Converters

Communication sites require isolated DC Converters to provide excellent voltage regulation, low noise, and high efficiency voltage conversion. Reliability is vital under continuous duty operation and high ambient temperatures. All these aspects were incorporated in the design of our rackmount DC Converters.

These units accept a wide input range at 24 or 48 VDC nominal, positive or negative ground, and produce pure 12 or 24 volt power. The solid state circuitry is conservatively designed and semi-conductors are selected and tested to withstand 200% of normal operating power.

Output voltage is maintained within 1% for all line and load conditions and the output is well filtered, allowing use with sensitive transceivers and telecom equipment.

Features

- 48, 24 volt inputs; 12, 24 volt outputs; positive, negative or floating ground
- Input/Output chassis isolation – 250 VDC
- 400 watt output
- Rated for continuous duty at full load
- Excellent regulation under all line/load conditions
- Low ripple provides noise free output
- High efficiency – 87% typical
- Easily adapts to both 19" and 23" racks, center mount (6" from front)
- Output volt and ammeter
- Output voltage adjustment on front panel
- Low profile – occupies two RU (one RU space above and below recommended for cooling)
